

el-table 使用 el-table-column 的 type="selection",产生的多选框, 点击获取 index 值:

1、在 el-table 绑定 row-class-name, 如: :row-class-name="tableRowClassName"

```
52 <el-table
53   ref="systemTable"
54   v-loading="tableLoading"
55   :border="border"
56   :data="tableData"
57   :show-header="showHeader"
58   :span-method="arraySpanMethod"
59   tooltip-effect="light"
60   class="table-layout"
61   :row-class-name="tableRowClassName"
   :style="customStyle"
   :height="height"
   @selection-change="handleSelect"
  </el-table>
```

2、给 tableRowClassName 写入属性, 如:

```
tableRowClassName(row) {
  row.row.index = row.rowIndex;
}
```
