el-table 中使用 el-table-column 的 tyoe 属性,type="selection",会产生产生一个多选框。那么,怎么拿到 index 值呢?

1.

在 el-table 中加入: row-class-name:"tableRowClassName"

```
ref="systemTable"
v-loading="tableLoading"
:border="border"
:data="tableData"
:show-header="showHeader"
:span-method="arraySpanMethod"
tooltip-effect="light"
class="table-layout"
:row-class-name="tableRowClassName"
:style="customStyle"
:height="height"
@selection-change="handleSelect"
```

```
tableRowClassName(row) {
    row.row.index = row.rowIndex;
},
```
